1. See it
 2. Shoot it
 3. Save it
- GO**

Recently, I discovered an app for my iPhone called Minelab Treasure Tracking and decided to give it a go. It's available for free at the Apple iTunes Store and it looks to be very promising. Much work went into coordinating all its functions that this application has to offer. I know this, after designing and redesigning the magazine app for Relic Hunter. The Apple xCode toolkit isn't very forgiving.

The Minelab Treasure Tracking has some great features for general use:

It's compatible with both iPhone and Android smart phones.

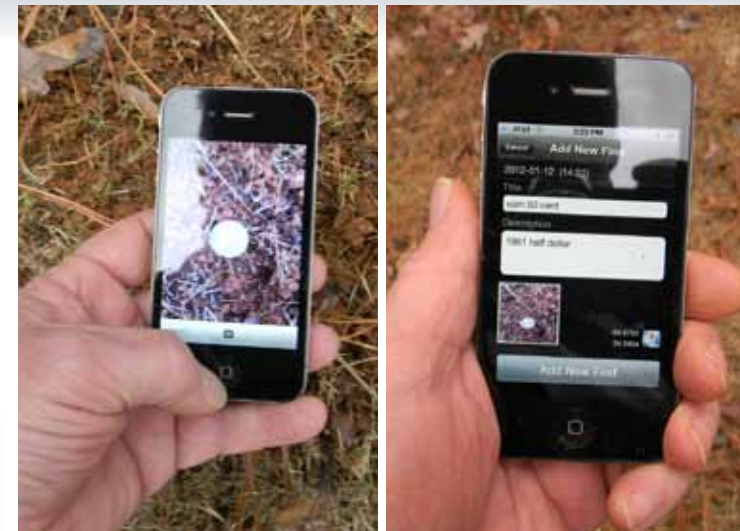

It allows you to photograph your find. Also, if you have your GPS location setting turned 'on' for photographs, the app will automatically attach this information to your photograph.

The app will also plot the GPS coordinates on a map, pinpointing your location. This is all processed without manually entering in anything. It's all done in the background, which is a real time-saver.

You're able to type out a description of your treasure, giving it a name and a brief description if you care to.

The app saves your photograph to a separate file, called the "Gallery". This is a collection of all your finds. One interesting aspect of this app is that each time you save an image to the "Gallery" and you're doing the GPS record, another pin drops down on the map.

Your information is 100% safe. Nothing is transmitted to anyone. If you want to share your discovery, you've got an option to email your find. This will show photo

like the one here on the page. Your information is sent as a PDF file.

Now for all you Minelab owners, you'll appreciate this special item that is also available. This app can also provide you operators manuals for current Minelab detectors.

E-Trac users get a special benefit from this app. You can display all factory set patterns and treasure hunting modes for this detector.

Find treasure anywhere with your pocket metal detector!

Minelab: **Epic Find** uses your iPhone camera to simulate real-life metal detection, with special audio cues to help you learn and distinguish among the varying tones and values of different treasures like Golden Nuggles, or mysterious relics like the Sheriff's Remains.

Unlock five popular metal detectors from Minelab, the industry's world leader in metal detection technology, and hunt across four worldwide locations.

Exciting Features:

* **Detect Mode:** Use your iPhone camera to scan the ground until you hear or see a change in tone.

* **Pinpoint Mode:** With your potential targets detected, pinpoint them by running your finger over tiles and listening for tones. A target ID (TID) on your detector interface will help you differentiate metals and strategize which digs to pursue.

* **Dig Mode:** Tap on individual tiles to reveal finds. Be frugal and accurate with your taps; you will have limited battery life on your detector, as well as fluctuating patience levels.

* **Locations:** Hunt for pirate treasure among the tropical islands of Florida, western relics in the desert mountains of Arizona, war relics in historical battle fields of Virginia, and gold along the western coast of Australia.

* **Minelab Rewards:** Unlock and redeem a special in-game offer once you advance to the last level!
